

PRODUCT SUSTAINABILITY POSITION

Purpose

Ecolab's product sustainability program establishes the basic principles to ensure human health and environmental sustainability is embedded into every aspect of the lifecycle of our products, in concert with our product safety and stewardship programs.

Scope

The scope of our product sustainability program is company-wide, including all regions and divisions.

Position

Ecolab is committed to reducing human and environmental exposure to hazards and promoting sustainable design through a holistic engineering approach which includes chemistry composition, format, packaging, dispensing and digital control systems.

Our corporate commitments to sustainability are rooted in our [2030 Impact Goals](#). In addition, Ecolab designs for sustainability of our products in support of these goals through:

- Our [Impacts that Matter program](#), which outlines eight science-based product design elements that we use to measure the sustainability of our products during new product development
- Incorporation of sustainability data into early phase raw material screening
- Ingredients and raw materials sustainability policy
- Our packaging program incorporating circular design principles and [ambitions to reduce waste](#)
- Annual internal review of our chemical portfolio and subsequent review with our businesses
- Annual external review of our chemical portfolio via the [Chemical Footprint Project](#)
- Our product safety and stewardship systems

Responsibility

The Corporate Sustainability Department is responsible for the implementation of this position. This position and the company's performance in implementing it is reviewed annually and updated as needed.
